February 2020

NYU Langone Dental Medicine has AEGD Post-MATCH Positions Available

Dear Juliette ,

I'm writing you to ask for your help and share this message with your 2020 graduating students. Our AEGD program has post-match positions available in a number of clinical training sites and locations across the U.S. for a July 1, 2020 start date. Our AEGD program is fully accredited and all of our clinical training sites are approved by the Commission on Dental Accreditation.

Our residents train in community health centers, safety net sites, and other practice settings where they receive "real world" training and experience in general practice dentistry that will meet and surpass their expectations to be prepared for their future practice endeavors and pursuits. During their training year, the residents become key members of an integrated dental and medical team providing comprehensive, quality oral healthcare to patients and help to alleviate the disparity that may exist with access to care experienced by some of our country's vulnerable communities.

Our residents complete the program well-positioned to, for example, launch solo practices, pursue advanced specialty programs, or continue working in public health dentistry. They are equipped with the confidence and skills to face the oral health challenges of the future.

The AEGD program provides its residents with a generous stipend, vacation and healthcare benefits.

For more information, interested students may call 646-801-0039 or email: info@lmcdental.info.

A list of locations with openings can be found at: www.lmcdental.org/open-positions or they may complete a free, online application here: www.lmcdental.org/apply.

Sincerely,

A handwritten signature in cursive script, reading "Martin Lieberman".

Martin Lieberman, DDS, MA
Vice President, Graduate Dental Education
NYU Langone Dental Medicine
Postdoctoral Residency Program

[illegible]

A healthcare professional, likely a nurse or doctor, wearing green scrubs and a stethoscope, is pointing at a large medical monitor. A patient with long brown hair is looking at the monitor with a focused expression. The setting appears to be a clinical or hospital environment.
